tudor@tudorgirba.com

Humane assessment is a method for making software engineering decisions. Assessing software systems to make decisions is a critical activity that needs to be approached explicitly during development.

Moose apprentice is an introductory course on using the Moose analysis platform for putting humane assessment into practice. Among others you will learn how to query a software system, how to measure it, how to visualize it, and how to browse it.

The course sessions are accompanied by hands-on exercises, and they are dedicated to software engineers.

Price +500 0 CHF (yes, it's free this time)

Date June 2-3, 09:00-17:00

Location Schützenmattstrasse 14
Room 107, 3012 Bern

Audience Software engineers & architects
with object-oriented experience

Tudor Girba is advocating that assessment must be recognized as a critical software engineering activity. He developed the humane assessment method, leads the work on the Moose analysis platform, and he is currently helping companies to rethink the way they manage complex software systems and data sets.
